

Journal	Country	Justification
International Journal of Modern Physics A (IJMPA)	Singapore	Primary Candidate. Published the foundational work by Watson and Musielak. This is the natural audience for continuity and engagement with the existing literature regarding the Chiral Dirac Equation.
European Physical Journal C (EPJ C)	Germany	Springer Option. A leading venue for Particles and Fields. It aligns with the requested typographical standards and offers rigorous review for mathematical physics and phenomenology.
Physics Letters B (PLB)	Netherlands	European Option. Specializes in rapid communications. Suitable if the Chiral Seesaw Mechanism is framed as a significant, novel letter-length result regarding CP violation.
Revista Mexicana de Física	Mexico	Mexican Option. The premier physics journal in the region. It maintains a solid reputation for theoretical physics, offering high regional visibility in Latin America.
Journal of Mathematical Physics (JMP)	USA	Alternative. Published by the AIP. Ideal if the final manuscript emphasizes the Bargmann-Wigner generalization and Clifford algebra derivations over the neutrino phenomenology.
